

# BUILDING A GAS GIANT

**1** Decide what colour you want your planet, and pick out two balloons of that colour

**2** Use a pair of scissors to snip the necks off both balloons

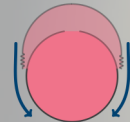

**3** Ask a friend to hold open one balloon, while you add a few handfuls of stuffing inside

**5** Cut the neck off the other balloon, and ask your friend to hold it open

**6** Stuff the filled balloon inside the empty one, so that the opening is completely covered

This is Jupiter, a gas giant famous for its red spot. It's a constant storm in Jupiter's atmosphere. Just this one storm is larger than our entire planet.
